AREA OF EXPERTISE

I bring a unique combination of education, experience and project management abilities to successfully meet a client's needs. I have a broad background in industrial, commercial, governmental and healthcare related projects. As a chemical engineer, I've encountered many opportunities in my career which have strengthened my ability to manage a profitable project. My project management role at LCK includes the selection of consultants, architects, engineers, and contractors, with oversight of each throughout the lifespan of each project.

I leverage my industrial and medical experience to manage the technical aspects of LCL assignments. Achieving a client's goals is the most rewarding part of what I do.

BUSINESS AND EDUCATIONAL BACKGROUND

I earned a Bachelor of Science degree from Clemson University in Chemical Engineering and have over 35 years of experience in multiple fields of project management. Additional strengths include business development, development, client communication and planning.

Prior to joining LCK, I served as the Design Project Manager for GMK Associates, Inc. where I led teams for industrial, healthcare, education, government, commercial projects located across the Carolinas and Georgia. I also was involved in site selection, building assessments, and due diligence studies. I have also previously held project engineering positions with BASF Corporation and Sandoz Chemicals, managing both national and international industrial and facility projects from inception to completion.

In addition to my project management background, I have experience as the Director of Marketing for the South Carolina Department of Commerce, managing a team to identify and recruit both national and

international companies to expand or relocate to the state of South Carolina.

PROFESSIONAL ACCOMPLISHMENTS

- Environmental Project Engineer for Sandoz Chemical Plant, Charlotte
